REFERENCE AUTHORS ACCESSION VERSION KEYWORDS SOURCE ORGANISM COMMENT DEFINITION FOCUS JÖURNAL MEDLINE TITLE PUBMED Email: panopoul@molgen.mpg.de The library was characterised by oligonucleotide fingerprinting (ONFP) to reduce sequencing redundancy. According to the ONFP procedure, clones giving the same hybridisation pattern with a battery of 200 8mer oligonucleotides are grouped into clusters. One clone per cluster is selected for sequencing. The size of each cluster is an indicator of the frequency of a transcript in the analysed library. The cluster size as well the coordinates of the rest of the clones assigned to the same fingerprint cluster as the clone from which the above BST is generated is available at the amphioxus project site at: http://www.molgen.mpg.de/amphioxus/ Clones and filters are distributed via the Resource Center/Primary Database of the German Genome Project (http://www.rzpd.de) Insert Length: 1200 Std Error: 0.00 Seq primer: 5'-CCGGTCCGGAATTCCCGGGT-3' pSport3/86 FORWARD: 5' CCCCAGGCTTTACACTTTATGCTTCCGGCTCG 3' BACKWARD: 5' GCTATTACGCCAGCTGGCGAAAGGGGGATGTG 3 laboratory 145, dept.Lehrach Max-Planck-Institut fuer Molekulare Genetik Ihnestr.63-73, D-14195 Berlin, Germany Panopoulou, G., Hennig, S., Groth, D., Krause, A., Poustka, A.J Herwig, R., Vingron, M. and Lehrach, H. The library was characterised by oligonucleotide fingerprinting
(ONF) to reduce sequencing redundancy. According to the ONF
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONF cluster is selected for sequencing. The size of each
cluster is an indicator of the frequency of a transcript in the
analysed library. The cluster size as well as the coordinates of
the other clones assigned to the same ONF cluster as the clone from
which the above EST is generated is available at the sea urchin
project web site at: http://www.molgen.mpg.de/ag_seaurchin/. CDNA
clones and filters are distributed via the Resource Center/Primary

                                                                                                                                                                                                                                                                                                                                                                                                                                        Poustka, A.J., Groth, D., Hennig, S., Thamm, S., Cameron, A., Reinhardt, R., Herwig, R., Panopoulou, G. and Lehrach, H. Generation, annotation, evolutionary analysis, and databa integration of 20,000 unique sea urchin EST clusters Genome Res. 13 (12), 2736-2746 (2003)
procedure, clones that display the same hybridisation matrix with a battery of 200 mer oligonucleotides are grouped into clusters. One clone per ONF cluster is selected for sequencing. The size of each cluster is an indicator of the frequency of a transcript in the analysed library. The cluster size as well as the coordinates of the other clones assigned to the same ONF cluster as the clone from which the above EST is generated is available at the sea urchin project web site at: http://www.molgen.mpg.de/ag_seaurchin/.cDNA clones and filters are distributed via the Resource Center/Primary

One clone per ONF cluster is selected for sequencing. The size of each cluster is an indicator of the frequency of a transcript in the analysed library. The cluster size as well as the coordinates of the other clones assigned to the same ONF cluster as the clone from which the above EST is generated is available at the sea urchin project web site at: http://www.molgen.mpg.de/ag_seaurchin/.cDNA clones and filters are distributed via the Resource Center/Primary Database of the German Human Genome Project (http://www.rzpd.de) PCR PRImers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        integration of 20,000 unique sea urchin EST clusters genome Res. 13 (12), 2736-2746 (2003)

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure clones giving the same hybridisation pattern with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per cluster is selected for sequencing. The size of each
cluster is an indicator of the frequency of a transcript in the
analysed library. The cluster size as well as the coordinates of
all clones assigned to the same fingerprint cluster as the clone
from which the above EST is generated is available at the amphioxus
project site at http://www.molgen.mpg.de/amphioxus.
Clones and filters are distributed via the Resource Center/Primary

BFL26 002560 Amphioxus 26hr cDNA library (Name convention: BFL26 or MPMGp531) Branchiostoma floridae cDNA clone MPMGp531L07115 5', mRNA 553 bp mRNA linear EST 26-AUG-2003

Panopoulou,G., Hennig,S., Groth,D., Krause,A., Poustka,A.J., Herwig,R., Vingron,M. and Lehrach,H.

New evidence for genome-wide duplications at the origin of vertebrates using an amphioxus gene set and completed animal

Email: panopoul@molgen.mpg.de
The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones giving the same hybridisation pattern with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
cluster is an indicator of the frequency of a transcript in the
analysed library. The cluster size as well the coordinates of the
rest of the clones assigned to the same fingerprint cluster as the
clone from which the above EST is generated is available at the
amphioxus project site at: http://www.molgen.mpg.de/amphioxus/
clones and filters are distributed via the Resource Center/Primary Database of the German Genome Project (http://www.rzpd.de) (M13RSP)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be conditioned. Gene coding for creatinine amidinohydrolase - used to quantify blood or urinary creatinine as a disease indicator.

P-PSDB; AAW11861.

WPI; 1997-059698/06. (тоум) тоуово кк.

Claim 4; Page 10-11; 12pp; Japanese.

which has a low Km value for creatine. The creatinine amidinohydrolase has the following physicochemical properties: (a) action: converts creatine and water into sarcosine and rourea; (b) optimum temp.: 40-45 deg.C; (c) optimum pH: 8.0-9.0; (d) thermal stability: about 50 or less (pH 7.5, 30 mins); (e) stable pH: a Ph range of about 4-10; (f) Km value: about 15.2 mM; (g) mol. wt.: about 4300 (SDS-PAGE); and (h) isoelectric point: about 3.5. The creatinine amidinohydrolase may be used in the quantification of blood or urinary creatinine and creatine as an indicator of various diseases This sequence encodes a thermally stable creatinine amidinohydrolase

A novel creatine amidinohydrolase enzyme has been developed which catalyees the reaction of creatine with water to form sarcosine and urea, is stable at temperatures of up to 50 degrees Celsius (pH 7.5, 30 minutes) and has an optimum temperature of 40-50 degrees Celsius, optimum pH of 8-9, a Km value for creatine of 3.5-10 mM in a binding assay using sarcosine oxidase and peroxidase, a molecular weight of 43 kD by SDS-PAGE and an isoelectric point of 3.5. The present sequence encodes creatine amidinohydrolase derived from Alcaligenes faecalis strain TE3581 (FERM P-14237), which is the wild type creatine amidinohydrolase to be mutated in the present invention. The enzyme can be used to determine creatine in a sample by measuring the absorbance of a dye formed by reacting the sample with a reagent, comprising the enzyme, sarcosine oxidase and a composition for detecting hydrogen peroxide, e.g. for diagnosis of

                                                                                             This DNA encodes a stable creatine amidinohydrase which is a mutant creatine amidinohydrase and has improved long-term stability in a ne buffer compared to wild type creatine amidinohydrase. A recombinant plasmid containing the stable creatine amidinohydrase gene can be us transform a cell for the recombinant production of the enzyme. This stable creatine amidinohydrase is useful as a diagnostic agent can be produced commercially
                                                                                                                                                                                                                                                                     Disclosure;

The invention relates to Alcaligenes faecalis creatine amidinohydrolase, which catalyses creatine and water to sarcosine and urea. Creatine amidinohydrolase can be produced by culturing a microorganism producing the protein in a nutrient medium and recovering the protein from the resulting culture. Creatine amidinohydrolase is useful as a routine reagent for clinical tests for determining creatine and creatinine in biological samples. This is particularly useful in diagnosing diseases such as uraemia, chronic nephritis, acute nephritis, giantism and tonic muscular dystrophy. The presence of creatine in a sample can be determined by measuring an absorbance of a pigment produced by the reaction of a reagent containing creatine amidinohydrolase with the sample. This sequence represents genomic DNA encoding Alcaligenes

                                                                                                                                                   The present invention describes a stable mutant creatine amidinohydrase having a long-term stability in a neutral buffer solution. Also described are: (1) a creatine amidinohydrase gene encoding the above stable creatine amidinohydrase; (2) a gene encoding a mutant creatine amidinohydrase; (2) a gene encoding a mutant creatine compared to wild type creatine amidinohydrase, in which at least one gene among those found in a fully defined 1212 nucleotide sequence (the present sequence) is replaced by another gene; (3) a recombinant plasmid containing a gene encoding the above creatine amidinohydrase; (4) a cell transformed by the above plasmid; and (5) a method for the preparation of a stable creatine amidinohydrase in which the above cell is cultured in a medium and creatine amidinohydrase is collected. The creatine amidinohydrase is useful as a clinical diagnosing agent
                                                                                                              Sequence 1212
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mutant creatine amidinohydrase for use in cl
term stability in a neutral buffer solution.

                                                                                                                                                                                                                                                                                                                                               CAH is used for quantification of creatine, e.g. to diagnose kidney disease by measuring creatine content of serum or urrine. CAH DNA can be inserted into host cells for the prodn. of CAH. CAH can now be produced efficiently without having to add creatine to the culture medium. ```
The present invention describes a variant of an Erwinia-type creatinase (I) modified relative to a wild-type creatinase having creatinase activity. The variant comprises at least one amino acid substitution at a position of the fully defined 404 amino acid sequence given in ABR43467: these are selected from N130, M203, IZ78, I1304 and F395. Creatinase has the EC number EC 3.5.3.3 and is also known as creatine amidinohydrolase. Also described is a reagent (II) for determining creatine comprising the Erwinia-type creatinase variant. The variant is useful for determining creatining and/or creatine concentration in a sample. Measuring creatinine and creatine are useful for diagnosing uraemia, chronic nephritis, acute nephritis, gigantism, tonic muscular dystrophy and some other related diseases. The mutant enzymes have improved stability, lower conductivity and/or lower Km-values for creatine: they are much better suited to detection methods for creatine. The present sequence encodes Erwinia sp. (DSM 97-934) wild-type creatinase from the present invention
                                                                                                                                                                                                                                                                                                                     New variant of an Erwinia-type creatinase modified relative to a wild-type creatinase having creatinase activity, useful for determining creatinine and/or creatine concentration in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Erwinia; creatinase; creatine amidinohydrolase; enzyme; EC 3.5.3.3; Erwinia-type creatinase; creatine; creatinine; uraemia; gigantism; chronic nephritis; acute nephritis; tonic muscular dystrophy; gene; ds.

                                                                             The present invention describes a variant of an Erwinia-type creatinase (I) modified relative to a wild-type creatinase having creatinase activity. The variant comprises at least one amino acid substitution at a position of the fully defined 404 amino acid sequence given in ABR43467: these are selected from N130, M203, I278, I1304 and F395. Creatinase has the EC number EC 3.5.3.3 and is also known as creatine amidinohydrolase. Also described is a reagent (II) for determining creatine amidinohydrolase. Erwinia-type creatinase variant. The variant is useful for determining creatinine and/or creatine are useful for dagnosing uraemia, chronic creatinine and creatine are useful for dagnosing uraemia, chronic creatinine, acute nephritis, gigantism, tonic muscular dystrophy and some other related diseases. The mutant enzymes have improved stability, lower conductivity and/or lower Km-values for creatine: they are much better without for diseases. The mutant enzymes have improved atability, lower suited to detection methods for creatine. The present sequence encodes a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            유 성
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 4; Page 33-35; 51pp; English.
